

PROJECT BRIEF

Solslinger — Demo Build Scope

Interactive proof-of-concept for client review: The Bloody Raven saloon with Phantom wallet connection, host avatar, and hover interactions.

PREPARED BY	DATE	DEMO PURPOSE	CHAIN
Stellar Code	September 2026	Client Approval — M2	Solana (Devnet)

Objective

Build a focused demo that shows the client exactly how their main hub — the Bloody Raven saloon — will look and feel. The demo demonstrates the Phantom wallet connection flow, a live 3D host avatar, and the visual design of the interactive room. Hotspots in the saloon are hover-animated but not navigable, keeping scope tight while still showing the full spatial concept.

What We're Building

3D Saloon Lobby	CORE
A WebGL 3D environment built with React Three Fiber. The saloon interior is the main scene — bar, tables, wall cabinets, a bulletin board, and ambient western lighting. Scaled 9:16 vertically for mobile, letterboxed on desktop.	
Phantom Wallet Connection	CORE
Full Solana WalletAdapter integration with Phantom as primary wallet. On landing, the user sees a 'Connect Wallet' prompt styled in the game's western UI language. Once connected, a truncated wallet address appears in the HUD -- exactly as intended for Milestone 1.	
3D Host Avatar	CORE
A rigged 3D character (glTF/GLB) positioned behind the bar acts as the saloon host. The avatar has an idle animation loop -- subtle breathing, hat tip, or glass-cleaning motion. The host reacts slightly when the user hovers a room hotspot (looks toward it).	

Hover Interactions on Room Hotspots

CORE

Four key areas in the saloon are hover-activated: Card Tables, Slot Cabinets, Bulletin Board, and Bar. On hover each area gets a glow/highlight effect and a floating label showing where it leads. Nothing is clickable or navigable in this demo -- interaction is limited to hover animations only.

Interaction rule for this demo: Hotspots are hover-only. No room navigation, no page transitions. This is intentional — the demo is showing the visual design and atmosphere, not the full navigation system.

Scope

IN SCOPE	NOT IN DEMO
✓ 3D saloon scene in React Three Fiber	- Room navigation / page routing
✓ Phantom wallet connect / disconnect	- Slot machines or card game logic
✓ Wallet address shown in UI on connect	- Saloon Credit system
✓ Rigged 3D host avatar with idle loop	- On-chain smart contracts
✓ 4 hover-animated hotspots with labels	- Avatar customizer (20 options)
✓ Host avatar reacts on hotspot hover	- Faction selection or passport
✓ 9:16 mobile-first canvas layout	- Train / WebGL onboarding intro
✓ Ambient audio toggle (optional)	- Pyth oracle or token transactions
✓ Western-themed UI shell and fonts	- Age gate or Telegram binding

Tech Stack

LAYER	CHOICE	WHY
Framework	Next.js 14	Client's specified stack; SSR for wallet provider
3D Rendering	React Three Fiber + Drei	WebGL scene, camera control, asset loading
Avatar / Scene	glTF/GLB assets	Rigged character + static scene objects
Wallet	Solana WalletAdapter + Phantom	Client-specified; connect/disconnect flow only
Animation	Three.js AnimationMixer	Avatar idle loop + hover state transitions

Hover UI	R3F raycasting + CSS overlays	3D hit detection, floating HTML labels
Network	Solana Devnet	Demo only — no real transactions

Saloon Hotspots

Four areas in the scene respond to hover. Each shows a glow and a floating label. No click action. The host avatar looks toward whichever area is hovered.

Card Tables

Hover label: "Card Rooms" — shows Blackjack & Hold'em in the full build. Green felt glow on hover.

Wall Cabinets

Hover label: "Slot Machines" — leads to Solslinger & Ghosts of the Dead Ringers in full build. Amber flicker on hover.

Bulletin Board

Hover label: "Faction War Map" — the regional conquest map with 5 territories. Paper rustle / pin glow on hover.

Bar Counter

Hover label: "Shoot Your Shot Lounge" — social DM area, accessible after Acceptance Letter purchase in full build. Bottle glint on hover.

Demo Delivery Steps

1

Scene Setup

Next.js project scaffold, R3F canvas, basic saloon geometry / lighting, 9:16 responsive layout confirmed on mobile.

2

Wallet Connection

Phantom WalletAdapter wired up. Connect button on landing overlay. Wallet address in top HUD on connect. Disconnect option in menu.

3

Host Avatar

GLB character placed behind bar. Idle animation playing. Look-at logic tied to mouse / hover state.

4

Hotspot Hovers + Polish

4 hover zones with glow + floating labels. UI typography and western styling applied. Final QA on mobile / desktop.
